# Creating a Coin Definition file for an SR5i

Money controls can supply individual coin definitions which can be combined into a single coin definition file. The coin definition file can be downloaded via PayLink to any SR5i on the ccTalk line.

This document covers how to create the coin definition file. See the Download API Description for instructions on how to download the file to the SR5i.
Windows Application

Run SR5FileSet.exe

Coin File
This application allows you to select the individual coins for each slot that you want to include in the coin definition file. Up to 16 coins can be selected. You can include multiple definitions of the same value and/or mix denominations. Unused coin file slots can be left blank.

Browse

Click the browse button, , and navigate to the coin definition directory. Select the desired coin file. A directory of coin definitions is included with this release but may not be up to date. Please get the latest coin definitions from Money Controls.

Omit
Tick the omit box, , to prevent the coin file being included in the Coin Definition file. This is the same as having a blank coin file name.

Write SR5 Coin Set
Once you are happy with the coin files loaded click the Write SR5 Coin Set button. You are prompted for the location to save the Coin Set File.

Clear Coins
Click Clear Coins and confirm your action to clear all 16 coin file names.

Exit
The Exit button saves the settings and exits the application.
